

CRAFTANOL-Te-50H

Tellurium-containing paste for grey cast iron

CRAFTANOL –Te- 50H is a tellurium-containing paste for application on moulds and cores for grey cast iron.

Application CRAFTANOL-Te-50H serves to stabilize carbide. The paste has a strong hardening effect and condenses the structure, so that the treated surface of the casting is no longer machinable. The depth of hardening is about 3 mm. Chilled surfaces can be obtained to any desired extent.

CRAFTANOL-Te-50H to be stirred uniformly before use and can be applied as a thick paste. To prevent tellurium from segregating, the addition of liquid should be as little as possible.

CRAFTANOL-Te-50H is especially for brushing and preferably applied to a base of normal coating to prevent metal penetration.

Physical Properties

Colour : Brown
Appearance : Paste
Carrier : Isopropyl Alcohol
Drying burning off or air-drying

Standard Packaging : 7 kg and 25 kg HDPE drum

Storage Cool and dry place

Shelf Life: Within 12 months from date of manufacturing.
